

Motor capacitors

MKP 352, MKP 354

Construction:

The capacitors are made of metallized polypropylene film in axial flat form. Surface coating by polyester film tape wrapped and epoxy resin sealed.
 Flame retardant construction available upon request (UL 94 V-0). Self healing ability

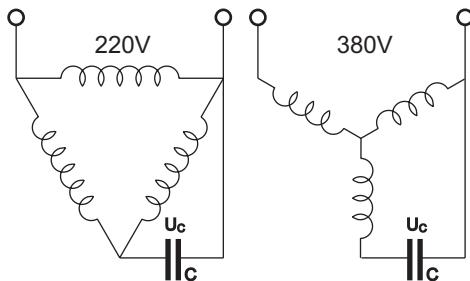

Leads: - tinned copper wire \varnothing 0,8 mm or
 - insulated wire or
 - insulated stranded wire $s=0,5\text{mm}^2$

The length: 40 ± 5 mm, other length on request available.

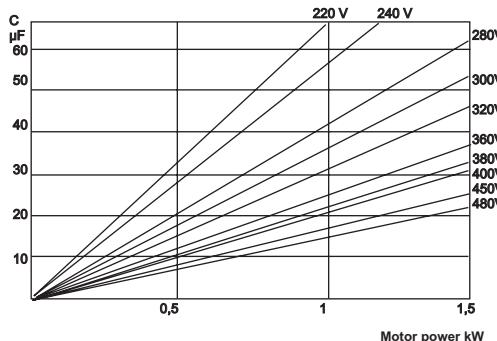

Application:

Motor capacitors are designed for the operation of induction motors on single phase mains supplies and also for the operation of three phase asynchronous Motors on single phase AC mains supplies. Motor capacitors can also be used in any AC application provided the specified operating conditions and permissible loads are not exceeded.

The operation of low-power motors can be enabled using a capacitors connected as shown below.

The capacitance for the motor power and working voltage can be provided by the graph.
